More About TouchCopy (Photos) TouchCopy Free Method 2: Move Photos and Videos from iPhone to Android: Unlike other types of media, Windows is actually quite easy to pass on photos and videos from iPhone to Android. iPhone to Android. Simply connect your iPhone to your computer and open it using file manager. Select your photos and videos from memory folder > DCIM. If you currently have another connection on your computer, connect Android and remove selected Android photos and videos. If you don't have a USB replacementCopy the photos and videos to the desktop. Then remove the iPhone safely and connect your Android. You can then pull the copied files from the desktop to Android. With Android, set a Google account that uses your phone from contacts and calendars. So you have to copy contacts from your iPhone to your computer and then import it into your Google account. This is great because you can access your contacts on any device via your Google account. Use Touchcopy to copy contacts to your computer and then import into Google - to use everything without iCloud. Connect your iPhone to Touchcopy and open the "Contacts" tab. Click "Copy as VCards" and select the location for saving. Go to your Google account in your internet browser (such as Google Chrome). You can achieve it by clicking the square grid next to your portrait photo in the upper right corner of the Google homepage. Select people. In the left part of this window, click on "Switch to the old version" (the new version does not yet support the import of contacts from the file). Click on "More"> "Import ...". Select the saved VCFARD files that we have copied with the TouchCopy and then click on "Import"! How can I transfer contacts from the old phone to a new one? Since your Android device (e.g. Samsung or Huawei) has to use the same Google account, you should now have access to the transferred contacts. Further information on touchcopy (contacts) Method for free download touchcopy 2: Transfer contacts from the iPhone to Android: Google Disk, how to transfer contacts from the iPhone to Android without computer. This is a great method if you do not have access to your computer. As we saw at the calendars, you have to download the Google hard drive to the iPhone. Start Google Disk on your iPhone. Touch the @ menu symbol and then the gear symbol. Click on "Save". Here you can change the backup settings. If you are ready, go down and click backup. As soon as you have supported your Google drive, you have access to any other device that is registered in your Google account. Method 3: How to transfer contacts from iPhone to Android: Transfer the contacts in the next great way to use the contact transmission. With this great tool you can transmit your contacts from your device from your device -without downloading online or cloud synchronization. Let's take a look at how to copy contacts directly from the iPhone to Android with contact transmission: Start: StartTransfer to a Windows 10 computer and select "iOS" as the source and "Android devices" as the destination. Click Continue. Then connect your device to your computer. See Device Connection Guide to send contacts via USB and Wi-Fi. Then click Continue. Select the contacts you want to copy from iPhone. You can select all contacts by clicking the "All" checkbox. Click on the translation! Learn more about sending contacts. Take the following steps to transfer iPhone calendars to Android: Connect your iPhone with CounkCopy and open the Calendars card. Click "Copy as vcard" and select the location of the recording. Sign in to your Google account app in a web browser (such as Google Chrome). You can access it by clicking on the square grid next to the vertical image in the top right corner of the Google homepage. Select a calendar. On the left side of this window, click the "+" next to "Add a friend's calendar". Select "Import". Select the saved VCFARD file we copied with TouchCopy and then click Import! Because the Android device must use the same account, you should now be able to access the moved calendars. Learn more about TouchCopy Method (Calendars) TouchCopy Free Download Method 2: Transfer Calendars from iPhone to Android: Google Drive, if you want to use services in the cloud to update and sync your devices, you can use Google to send iPhone data. And from iPhone to Android. To do this, you need to download the Google Drive app for iPhone. Launch Google Drive on your iPhone. Press the menu icon i and then the transfer icon. Click "Backups". Here you can change the backup creation settings. When you're ready, scroll down and click "Start backing up." After backing up your data to Google, you can access it from any other device connected to your Google account. Unfortunately, it is not possible to transfer some media files from iPhone to Android without using the manufacturer's app as shown in step 1. This means that media files such as messages, notes, voicemail, voicemail, connection logs, Internet History, notes, and files, you can backup iPhone on your computer using TouchCopy. You can even print them or save them as a PDF file, depending on the type of medium. If you want to transfer messages from your old phone to your new one, our Droid transfer software will do it as long as both devices are using it! The operating system is described in detail in the article in our blog (transfer of Android messages to Android). We are currently studying the possibility of adding the transmission function of messages from the iPhone on Android in Droid Transfer and our transfer company application, available in the Google Play Store. Please follow this article for future updates. Find out more about the transfer of droid as soon as you make sure you have transferred all the necessary data from your iPhone to the new Android, you may have a temptation to sell or have your old iPhone. But wait! ... We strongly recommend that you make a backup copy of your iPhone data before getting rid of the device in case something goes wrong with your Android or you will miss something important during migration. It is recommended to create file backup copies on your computer in a readable format (using a tool such as touchcopy), as it means that you can access any file at any time. However, backup using iTunes or iCloud will create a backup file that you cannot use to access your data. To what extent the effectively erasure and erasure of your iPhone now, if you are thinking of the sale, gift or treatment of your iPhone, you need to make sure it is sure. Since your iPhone may contain important personal information, it is very important to erase it before leaving it. This is done for your confidentiality and your safety and it is necessary that someone else can use the device. So, let's see how to erase and delete the iPhone settings: leave the iCloud, iTunes Store and App Store: on devices with iOS 10.3 or subsequent version - Open "Settings"> Touch [your name]> "Exit". Enter your Apple ID password and click on "Turn it off". Devices with iOS 10.2 or previous versions: Open "Settings"> Press "Reset"> "Erase". Click again "leave", then click "Delete from my iPhone" (you may need to enter the Apple ID password). Finally, go to "parameters"> "iTunes & App Store"> "Apple ID"> "Exit". Wipe the contents of the iPhone: Take your iPhone and open the "Settings" app. Click on "General". Scroll down and press "Reset", then "Remove all content and settings". Click on "Delete now". Enter the password of your iPhone. Finally, enter your Apple ID password if the "search iPhone" function is included. Disconnect iMessage so that the messages do not disappear on your Android device: open the "parameters". Click on "messages". You have now transferred all your data from your iPhone to the new Android phone, created a backup copy of your data, cleaned your iPhone and are ready to sell it or process it. We hope you like leadership! The address book!
