The Planet Turns... A Suitable Test Down In The '1 Page 2OK, I had seen this a few times on the HobbyKing website, and while I was ordering some batteries, I decided to buy yet another RC.Photo van during the construction The Raising was set at about forty pounds, and after looking through the hobbyking website I had made a short list of 4 µ. There are interminable uses, of finding the maximum speed of your model and using the rigid data to refine your configuration, and of course there are probable template rights that you could not display around youtube!Heck, you can even attach a small battery and leave it in your children's backpack and see if they actually went to the school library or not!Quantum GPS Logger is just one of these tools that you should not have in your toolbox for when the hard data is better than your calibrated eyeball.Specify µes:Receiver: NEO6M U-BLOXFrequency: L1, 1575.42 MHz, CodeChannels C/A; Maximum speed recording: 1000km/hSensitivity: -161 dBm (Navigation Tracking)Accuracy: 2.5 m (GPS), 2.0 m (SBAS)Cold start: 27 s approx. Navigation: UTC date and time, geographical coordinates, time, speed, headingRecord: geographical coordinates, date and time, speed, route, distance (up to 100 km)Time of recording: 1000 hoursLogon/logoff control: Manual, RC (1520us)Indicator: LCD, 2*16 with rear lightControl: menu/page, enterVoltage: 4.5V ~ 6.5Vcurrent: 80mA SingleSize: 24 x 77 x 18mmWeight: 43g*Note: To download the NMEA file to your computer for 3 mapping, you will not need a standard RS-232 cable - not included. All other information µ be viewed of the LCD and Integrated Menu. Post more liability exemption: the above price includes all applicable taxes and fees. Finally! I finally bought a GPS tracker the desertcart does not valid any claim made in above. To build the model takes only about 10 minutes, just stick the wing on the fuselage, stick the tail on the fuselage and finally stick the vertical stabilizer in place, cool and simple!Check out the flight video on YouTube and as always, make comments and tell me what you don't think!T-28 Funfighter first flight!Construction Timelapse! Details Written by Mat White Category: Last update of Gizmos and RC: October 24, 2014 I wanted to know what fast these foam models can fly and which were the fastest!! wondered if they were the small and light models or the big and powerful ones. For additional µ, please contact the manufacturer or the desertcart customer service. BOOLE INC. Modes are: 1) Navigation - current location µ, 2) Registration - basically start the registration, 3) View data and 4) Connect to PC. Research and develop electronic products and open 3 hardware with the aim of promoting MAKER SPAINO and DIY practice. It tracks your location, distance traveled, time and maximum speed. There are four modes by which you can't scroll using the hot µ on the side. Finally the ESC, which is only one blue block and two very cheap spare adhesion are at the bottom of the box, the avi comes with a 3rd adhesion, but it is not what I have already assembled. The data can be viewed on the LCD with integrated backlight or NEMA data can be downloaded to a PC and plotted on map sites like Google Earth. Supplied in the box you do not receive (this is a PNP version) the fuselage, wings, tail plane, vertical stabilizer and then installed the brush-free engine 2825-1950kv and 3 well glued in servos. I bought this from ebay, but it's sold on the Hobbyking site for about £35 pounds. Durafly Critical Mass, the MXSR, Geebee R3 and finally the T-28 funfighter.
