Hexadecimal numerals are widely used by computer system designers and programmers. As each hexadecimal digit represents four binary digits (bits), it allows a more human-friendly representation of binary-coded values. World's simplest online text to decimal converter for web developers and programmers. Just paste your text in the form below, press the Convert button, and you'll get decimal numbers. Press a button - get decimals. No ads, nonsense, or garbage. Works with Unicode and UTF8 as well. Announcement: We just launched Online Text Tools - a collection of browser-based text processing utilities. Check it out! Want to convert Decimal to Text? Use the Decimal to Text converter! A string to decimal number converter can be useful if you're doing cross-browser testing. For example, if you're writing a web application that transfers messages using a simple non-binary text protocol, then it may get tricky to transfer multi-byte characters (such as Unicode symbols and emojis). With this utility, you can convert any text, Unicode glyphs, and multi-byte strings into decimal numbers (or integers). These decimal numbers represent keycodes, ASCII code, or multi-byte UTF8 sequences of the input data. If you're writing a unit test for such data transformations, then this program will be very helpful. Any data in the input field will get converted into a sequence of decimal numbers that you can then use as input and output data for a unit test. Additionally, if you want to obfuscate text you can run it through this utility and you'll simply get a sequence of numbers that someone will need to decode to read. Pro tip: You can use ?input= text query argument to pass text to tools. Enter hex bytes with any prefix / postfix / delimiter and press the Convert button (e.g. 45 78 61 6d 70 6c 65 21). ASCII to hex converter - ASCII text encoding uses fixed 1 byte for each character. UTF-8 text encoding uses variable number of bytes for each character. This requires delimiter between each hex number. How to Convert Hex to Text Convert hex ASCII code to text: Get hex byte Convert hex byte to decimal Get character of ASCII code from ASCII table Continue with next byte Example Convert "50 6c 61 6e 74 20 74 72 65 65 73" hex ASCII code to text: Solution: Use ASCII table to get character from ASCII code. 5016 = 5x161+0x160 = 80+0 = 80 => "P" 6c16 = 6x161+12x160 = 96+12 = 108 => "l" 6116 = 6x161+1x160 = 96+1 = 97 => "a" ; For all the hex bytes you should get the text: "Plant trees" How to convert Hex to Text?
